

**Give Access Your Clients Access to Sage MAS 90™ or MAS 200™  
Whenever, Wherever**

bly|MOBILE™ expands the reach of your clients' business, enabling executives, sales, service, purchasing, warehouse, delivery and other critical teams to be productive no matter where they are, or in the environment they choose.

Since the bly|MOBILE suite uses Providex™-based technology adapted to flexible delivery options, your clients can enjoy the power and intelligence of your Sage MAS 90™ or MAS 200™ system using the device most convenient for them. bly|MOBILE utilizes existing Sage MAS 90 and MAS 200 business logic and programming standards to ensure that its functionality, integrity and reliability are identical to that of your clients' ERP business applications. You can even configure and control bly|MOBILE from within your clients' Sage MAS 90 or MAS 200 to fit their business needs and streamline their operations.

# HOW DOES IT WORK?

bly|MOBILE takes Sage MAS 90/200™ panels and converts them to Dynamic HTML (DHTML) and along with the associated JavaScript provides an AJAX based interface. This conversion is done dynamically at run time by the bly|MOBILE rendering engine.

In order to render the MAS 90/200 panels, each control is emulated through host side objects that provide functionality consistent with those of normal ProvideX™ controls. When running under bly|MOBILE, core application code that references MAS 90/200 controls is handled by the host side objects. The objects are responsible for the generation and on-going updating of the HTML through the supporting JavaScript library.

## Transport Layer:

bly|MOBILE itself is not a web server but rather uses a web server as the go-between for your clients application and the user browser. bly|MOBILE currently works with the industry standard Apache™ web server.

When the web server receives a request for a bly|MOBILE transaction, it will launch a background process on the host server. The process is assigned a session ID that is used to uniquely identify the process on the server.

The process then runs bly|MOBILE which will present your Sage MAS 90/200 panels as HTML web pages. These web pages are sent back to the web server for subsequent delivery to the workstation. The background process then stays active waiting for subsequent input from the workstation/device. The result is a fast, reliable connection that enables users to be productive anytime they need it, anywhere they may be.

## MAS:bMobile is Apple™ iPhone™ & iPad™ Ready!
